### MUSICOIN PLATFORM

With the trust-able and immutable MC currency, smart contracts can then be created to run automatically to ensure that payments are made correctly, directly and immediately, and also that the correct content is shared to the requesting party. A series of contract templates have been designed that can be used by creators for different types of usage and consumption. The first, and perhaps most important contract is the Pay-Per-Play (PPP) contract. PPP automates the unit consumption of music (i.e. streaming of one song) so that once the listener clicks 'play', there is an immediate transaction which pays the creator directly as specified within the contract. Again, each and every transaction is recorded and made visible on the network, eliminating any possibility of tampering or removal.
